January 2003

Dear Iowans:

Few functions at the Iowa Department of Public Health are more important than monitoring our health status. So, we take seriously our responsibility to keep track of trends in the population.

Some of those trends are directly related to health, such as disease rates and causes of death, and some are indirectly related, such as birth rates and ages of mothers who give birth. Both give clues to the status of our health and help determine the Department's priorities.

Among the most noteworthy of these trends is the one for the number-one killer of Iowans, and of all Americans, heart disease. Happily, the rate of death from heart disease continues to decrease, from 319.1 per 100,000 persons in 1997 to 281.3 in 2001. Last year's decrease was among the steepest, down from 290.3 the year before. We hope that our health messages on smoking, exercise, good nutrition and stress reduction have had an influence on that rate. We also hope that 'Lighten Up Iowa', a nutrition-exercise-weight loss initiative of our Department, the Iowa Games and the Iowa State Extension Service, will have an even greater influence on the rate of death from heart disease.

We can also report decreases in death rates for influenza and pneumonia, HIV and birth-related deaths. An exception in the later category was the rate for fetal deaths or "stillbirths." They increased from 5 to 6.1 per 1,000 live births in 2001.

Slight increases in death rates occurred for cancer, cerebrovascular disease and unintentional injuries, excluding vehicle crashes, which remained the same. More significant increases were recorded for chronic lower respiratory disease, which climbed from 51.5 to 53.1 per 100,000 persons, and suicide, which increased from 9.8 to 10.4 per 100,000.

In the coming year, these and many other data will guide us in determining strategies to promote and protect the health of Iowans.

Jane Colacecchi  
Interim Director

## **Trends in 2001 Vital Statistics**

This year's publication reflects a continuing effort to report trends, rather than mere raw data. That effort will continue next year and in subsequent reports with the goal of making the data more useful and user friendly.

Examples of trends in this report are in Tables 1 through 3, 10, 11, 13, 14, 24, 30, 31, and 35. Table 13, for instance, shows trends for selected cardiovascular disease deaths as a percent of total deaths in the last ten years.

Trends are also plotted on Figures/Charts 1 through 29. For example, Figure 1 shows trends in live births and deaths in the last 10 years and Figure 2 shows trends in marriages and dissolutions in the last 10 years.

Many trends show improving health in Iowa. There are also areas of concern that need to be monitored closely.

Additional trends in Iowa health indicators are available in the *Iowa Health Fact Book* as well as in the web-based *Family and Community Indicator Tracking System* (FACITS). The *Iowa Health Fact Book* is a joint publication of the Iowa Department of Public Health (IDPH) and the College of Public Health at the University of Iowa. Links to this document can be found on-line at [www.idph.state.ia.us](http://www.idph.state.ia.us) or at the University of Iowa College of Public Health site, [www.publichealth.uiowa.edu/factbook](http://www.publichealth.uiowa.edu/factbook). The FACITS can be accessed through the IDPH web site @ <http://www.idph.state.ia.us/facits>.

42.	Deaths Ranked by County, 2001 .....	118
43.	Suicide Deaths Ranked by County, 2001 .....	119
44.	Unintentional Injury Deaths Ranked by County, 2001 .....	120
45.	Web information.....	121

## TECHNICAL NOTES

### DEFINITIONS:

---

**Annulment:** A court decree voiding a marriage from the beginning. Annulments are included with divorces for rate calculation purposes and are available only by place of occurrence.

**Cause of Death:** Deaths, by cause, are classified according to the *International Classification of Diseases, Ninth Revision*, adapted for use in the United States. It is the disease or injury that initiated the sequence of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury. The responsibility for indicating the underlying cause of death is that of the certifying physician or medical examiner.

**Congenital Malformation:** Deformity existing before birth.

**Divorce:** A court decree dissolving a marital relationship. Divorces are included with annulments for rate calculation purposes and are available only by place of occurrence.

**Fetal Death:** A birth that fails to show any sign of life after delivery. Reportable fetal deaths in Iowa are those greater than 20 weeks gestation. The responsibility for determining if a birth meets this definition is that of the attending physician. "Fetal death" and "stillbirth" are synonymous terms.

**Infant Death:** Death of a live-born infant under one year of age. Includes both neonatal and postneonatal deaths.

**Live Birth:** A birth that shows any sign of life after delivery. The World Health Organization considers a sign of life as being the breathing or showing of any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. The responsibility for determining if a birth meets this definition is that of the attending physician. In this publication, the terms live birth and birth are used synonymously.

**Live Birth Order:** An expression of the numeric relationship of a child to others liveborn to that mother.

**Low Birth Weight:** A weight at birth of under 2,500 grams or 5 pounds, 8 ounces.

**Marriage:** The legal union of individuals. Marriages are available only by place of occurrence.

**Maternal Death:** A death due to complications of pregnancy, labor, delivery or puerperium.

**Neonatal Death:** Death of liveborn infant occurring within the first 27 days of life.

**Occurrence Data:** Data compiled by the geographical place the event occurred without regard to residence.

**Other Race:** Includes persons stating themselves as other than Black or the categories included in "White."

**Perinatal Death:** Death of a fetus of greater than 20 weeks gestation or death of a liveborn infant under 28 days of life.

**Primary Marriage:** Dissolution of a first marriage for both parties.

**Postneonatal Death:** Death of a live-born infant after the first 27 days of life, but before one year of age.

**Resident Data:** Data compiled by the usual place of residence without regard to the geographical place where the event occurred. For births, the mother's usual residence is used as the place of residence of the child.

**White Race:** Includes persons describing themselves as White, Cuban, Mexican, Puerto Rican, or other Hispanic. Also for persons for whom race is not stated.

**American Indian or Alaska Native:** A person having origins in any of the original peoples of North and South America (including Central America), and who maintain tribal affiliation or community attachment.

**Asian:** A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam.

**Black or African American:** A person having origins in any of the black racial groups of Africa

**Hispanic or Latino:** A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race.

**Native Hawaiian or Other Pacific Islander:** A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands.

## TIPS ON USING VITAL STATISTICS

This publication is an historical recording of the most requested statistics on vital events and is a source of information that can be used in further analysis. While many users of vital statistics have a good working knowledge of this subject, others may not fully understand the data limitations. This section discusses items to help the reader use this document.

**Quality of the Data:** Every precaution is taken to minimize errors in the raw data during its preparation and receipt. The data are from certificates of vital events--births, deaths, marriages, divorces, and annulments.

Each document is edited for consistency and completeness. Queries are initiated to complete or verify information on the certificate. The department is not able to change information on certificates without certifier concurrence. Therefore, the quality of the data is often dependent on the decisions of the certifying agent.

**Residence or Occurrence:** All data contained in this publication are by residence except marriages and divorces.

**Total, Rates, or Ratios:** Vital events can be reported as totals, rates, or ratios. Totals will suffice as long as the user knows how many times a certain event occurred and no relationship or comparison is to be made with other areas or different periods.

When different areas or periods are being studied, it may be best to use rates or ratios. Populations vary between areas or over time in the same area. It may be that variations in occurrence result from changes in the population and do not indicate a new trend in the vital event.

Rates or ratios express the occurrence of vital events in relation to a set standard. For example, the crude birth rate is expressed per 1,000 total population; the age-specific birth rate is expressed per 1,000 females in the specific age category. This comparison removes differences between sizes of the age group being compared over time and allows for analysis of changes in vital event patterns.

**Small Number Limitations:** There are two limitations involving small numbers. One involves a small number of occurrences for a particular vital event. The other involves rates or ratios calculated for a small population even though the number of occurrences of that event may not be considered small. Caution should be exercised concerning the use of such data. Statistical stability cannot be assured when small numbers are used in some formulas. Determination of what constitutes a small number must be made by the individual user. Numbers smaller than 16 and populations less than 100 are generally considered unstable for use in most statistical computations.

# **FORMULAS**

## **NATALITY FORMULAS**

$$\text{BIRTH RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{LOW BIRTH WEIGHT RATIO} = \frac{\text{Number of Live Births with Birth Weight Under 2,500 grams}}{\text{Number of Live Births}} \times 1,000$$

$$\text{RATIO OF BIRTHS TO UNMARRIED WOMEN} = \frac{\text{Number of Live Births to Unmarried Women}}{\text{Number of Live Births}} \times 1,000$$

$$\text{AGE - SPECIFIC BIRTH RATE} = \frac{\text{Number of Live Births to Women in Specific Age Group}}{\text{Estimated Female Population in that Age Group}} \times 1,000$$

$$\text{GENERAL FERTILITY RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Female Population 15 - 44 Years of Age}} \times 1,000$$

## **MARRIAGE FORMULAS**

$$\text{MARRIAGE RATE} = \frac{\text{Number of Marriages}}{\text{Estimated Midyear Population}} \times 1,000$$

## **DIVORCE FORMULAS**

$$\text{DIVORCE RATE} = \frac{\text{Number of Divorces and Annulments}}{\text{Estimated Midyear Population}} \times 1,000$$

## MORTALITY FORMULAS

$$\text{DEATH RATE} = \frac{\text{Number of Deaths}}{\text{Estimated Midyear Population}} \times 1,000$$

AGE ADJUSTED DEATH RATE \* =

$$\left( \frac{\text{Decedents } < 1 \text{ Year of Age}}{\text{IA Midyear Population } < 1 \text{ Year of Age}} \times 2000 \text{ U.S. Standard Million Pop. } < 1 \text{ Year of Age} + \right.$$

$$\frac{\text{Decedents Aged 1 - 4}}{\text{IA Midyear Population Aged 1 - 4}} \times 2000 \text{ U.S. Standard Million Pop. Aged 1 - 4} +$$

$$\frac{\text{Decedents Aged 5 - 14}}{\text{IA Midyear Population Aged 5 - 14}} \times 2000 \text{ U.S. Standard Million Pop. Aged 5 - 14} +$$

$$\frac{\text{Decedents Aged 15 - 24}}{\text{IA Midyear Population Aged 15 - 24}} \times 2000 \text{ U.S. Standard Million Pop. Aged 15 - 24} +$$

$$\frac{\text{Decedents Aged 25 - 34}}{\text{IA Midyear Population Aged 25 - 34}} \times 2000 \text{ U.S. Standard Million Pop. Aged 25 - 34} +$$

$$\frac{\text{Decedents Aged 35 - 44}}{\text{IA Midyear Population Aged 35 - 44}} \times 2000 \text{ U.S. Standard Million Pop. Aged 35 - 44} +$$

$$\frac{\text{Decedents Aged 45 - 54}}{\text{IA Midyear Population Aged 45 - 54}} \times 2000 \text{ U.S. Standard Million Pop. Aged 45 - 54} +$$

$$\frac{\text{Decedents Aged 55 - 64}}{\text{IA Midyear Population Aged 55 - 64}} \times 2000 \text{ U.S. Standard Million Pop. Aged 55 - 64} +$$

$$\frac{\text{Decedents Aged 65 - 74}}{\text{IA Midyear Population Aged 65 - 74}} \times 2000 \text{ U.S. Standard Million Pop. Aged 65 - 74} +$$

$$\frac{\text{Decedents Aged 75 - 84}}{\text{IA Midyear Population Aged 75 - 84}} \times 2000 \text{ U.S. Standard Million Pop. Aged 75 - 84} +$$

$$\frac{\text{Decedents Aged 85 + }}{\text{IA Midyear Population Aged 85 + }} \times 2000 \text{ U.S. Standard Million Pop. Aged 85 + } )$$

2000 Total U.S. Standard Million Population X 1,000

\*Year 2000 Projected Standard Population May Be Used in the Above Formulas.

$$\text{CAUSE - SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Cause}}{\text{Estimated Midyear Population}} \times 100,000$$

$$\text{AGE - SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Age Group}}{\text{Estimated Population in that Age Group}} \times 1,000$$

$$\text{INFANT DEATH RATE} = \frac{\text{Number of Deaths } < 1 \text{ Year of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{CAUSE SPECIFIC INFANT DEATH RATE} = \frac{\text{Number of Deaths } < 1 \text{ Year for Specific Cause}}{\text{Number of Live Births}} \times 1,000$$

$$\text{NEONATAL DEATH RATE} = \frac{\text{Number of Deaths } < 28 \text{ Days of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{POSTNEONATAL DEATH RATE} = \frac{\text{Number of Deaths 28 or More Days, but } < 1 \text{ Year}}{\text{Number of Live Births}} \times 1,000$$

$$\text{PERINATAL DEATH RATE} = \frac{\text{Number of Fetal Deaths 20 or More Weeks of Gestation plus Infant Deaths } < 28 \text{ Days of Age}}{\text{Number of Live Births}} \times 1,000$$

(The definition of perinatal mortality varies from state to state. Caution should be exercised in comparing this ratio between states.)

$$\text{FETAL DEATH RATIO} = \frac{\text{Number of Fetal Deaths 20 or more Weeks of Gestation}}{\text{Number of Live Births}} \times 1,000$$

(The definition of a fetal death varies from state to state. Caution should be exercised in comparing this ratio between states.)

$$\text{MATERNAL MORTALITY RATE} = \frac{\text{Number of Deaths due to "Pregnancy, Childbirth, and the Puerperium" (ICD-10 O00 - O99)}}{\text{Number of Live Births}} \times 100,000$$

## IOWA SUMMARY HIGHLIGHTS

	<u>1991</u>	<u>2001</u>
<b>Births:</b>		
Total <sup>1</sup>	13.9	12.9
Percent of mothers aged 19 and under	10.5	9.5
Percent low birth weight	5.7	6.4
Out-of-wedlock <sup>2</sup>	222.1	287.8
<b>Deaths:</b>		
Total <sup>1</sup>	9.8	9.5
Infant <sup>2</sup>	8.0	5.6
Neonatal <sup>2</sup>	4.4	3.4
Fetal <sup>2</sup>	6.0	5.0
Maternal <sup>3</sup>	5.1	10.5
<b>Selected Causes:</b>		
Heart Disease <sup>4</sup>	344.9	289.7
Cerebrovascular Disease (Stroke) <sup>4</sup>	74.7	74.1
Arteriosclerosis <sup>4</sup>	13.8	9.3
Unintentional injuries <sup>4</sup>	39.4	35.6
Homicides <sup>4</sup>	2.7	2.2
Suicides <sup>4</sup>	11.9	10.4
Teenage Suicides (ages 10-19) <sup>4</sup>	6.4	1.3
<b>Marriages:</b>		
Total <sup>1</sup>	8.4	7.2
<b>Dissolutions:</b>		
Total <sup>1</sup>	3.9	3.3
Percent Involving No Children	41.0	45.9

<sup>1</sup> Rate per 1,000 population

<sup>2</sup> Rate per 1,000 live births

<sup>3</sup> Rate per 100,000 live births

<sup>4</sup> Rate per 100,000 population

All rates are crude rates.

## SELECTED RECORDS AND TRIVIA IOWA 2001

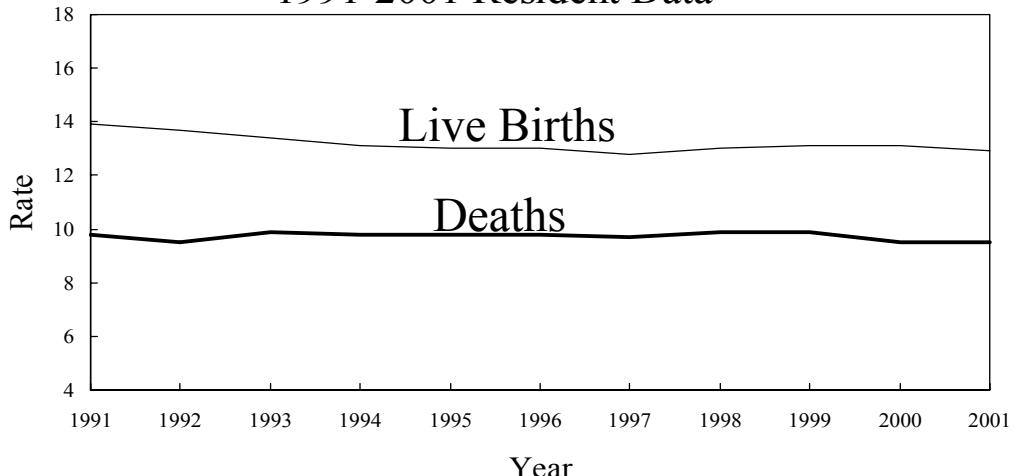

<b>NATALITY</b>			
Oldest Father:	71	Oldest Mother:	49
Youngest Father:	13	Youngest Mother:	13
Smallest Live Birth:	0 lb. 6 oz.	Largest Live Birth:	13 lb. 1oz
Highest Live Birth Order:	16 (15 live-born brothers and sisters)		
Day Most Births Occurred	August 8,2001	(151 births)	
Day Fewest Births Occurred	December 25,2001 (46 births)		
Most Popular Names for Babies			
<u>Boys' Names</u>	Number	<u>Girls' Names</u>	Number
Jacob	434	Madison	329
Tyler	256	Hannah	311
Logan	246	Emma	265
Ethan	237	Emily	260
Nicholas	226	Alexis	226
Austin	222	Taylor	207
Zachary	215	Elizabeth	191
Noah	214	Abigail	189
Andrew	212	Grace	184
Dylan	208	Samantha	174
<b>MORTALITY</b>			
Oldest Male Decedent:	107	Oldest Female Decedent:	111
<b>MARRIAGE</b>			
Oldest Groom:	94	Oldest Bride:	92
Youngest Groom:	16	Youngest Bride	15
<b>DIVORCE</b>			
Oldest Male Divorcee:	93	Oldest Female Divorcee:	87
Youngest Male Divorcee:	17	Youngest Female Divorcee:	17
Marriage of Longest Duration Ending in a Divorce: 65 years

Figure 1: Live Births and Deaths

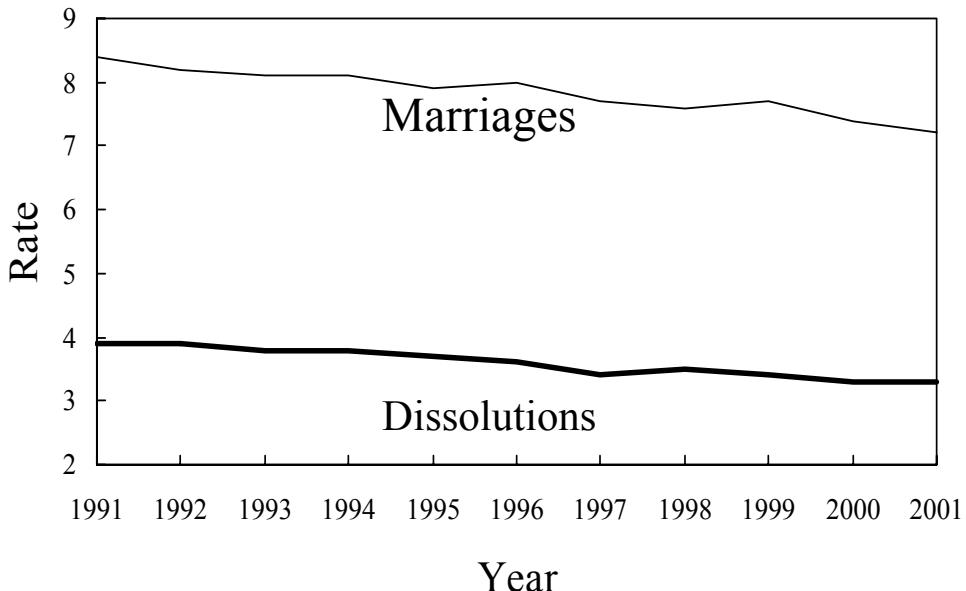

1991-2001 Resident Data

In 2001, the live birth rate lowered to 12.9 per 1,000 population. The current birth rate is comparable to the rate in 1997. The death rate was the same for 2000 and 2001. This is the lowest death rate since 1992 .

Figure 2: Marriages and Dissolutions

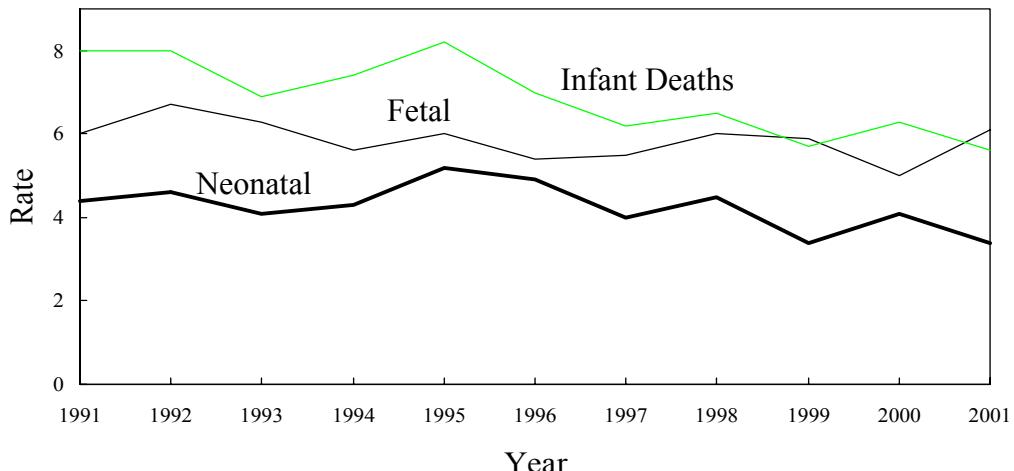

1991-2001 Occurrence Data

The current marriage rate of 7.2 per 1,000 population is down from 7.4 for 2000 and has dropped considerably from the 8.4 rate for 1991; the decrease has been nearly continuous.

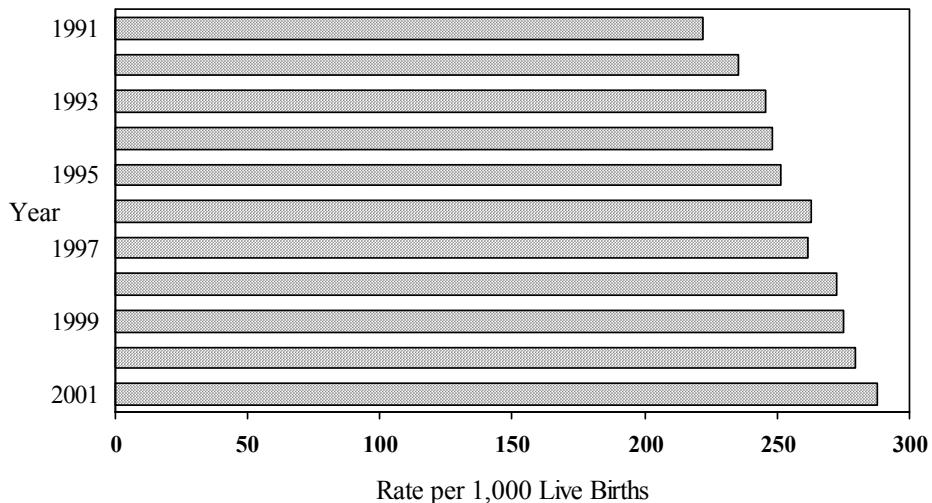

At 3.3, the dissolution rate remains the same as in 2000. The graph reveals a steady decline, with the exception of 1998, showing a slight increase.

**Figure 3: Fetal, Neonatal, Infant Deaths  
1991-2001 Resident Data**

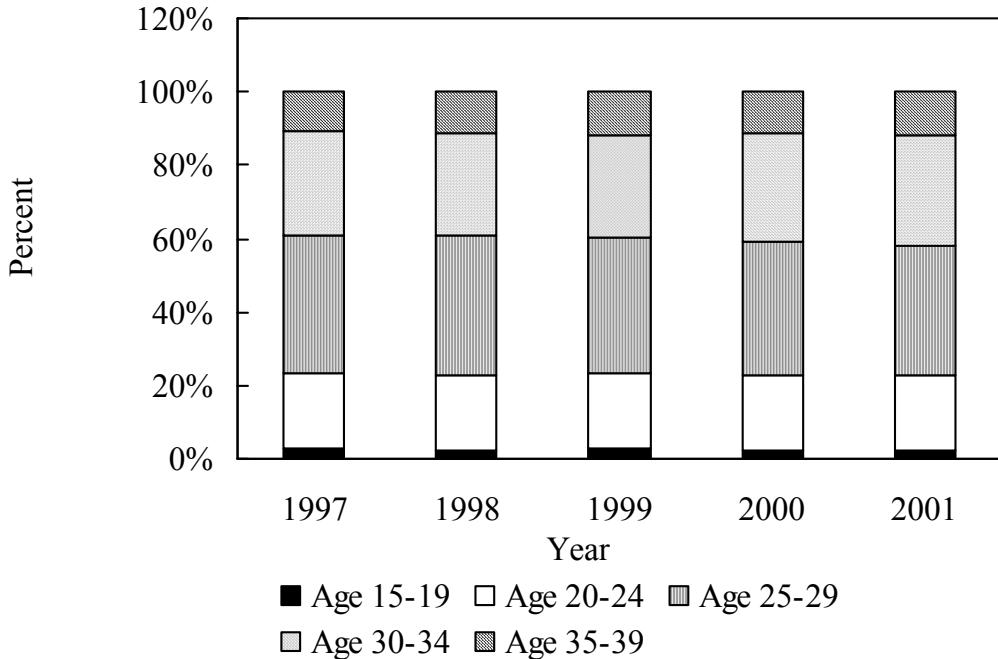

The infant death rate has fluctuated downward from 8 per 1,000 live births in 1991 to a current 6.1. During 1991-2001, the lowest rate was 5.6, which was noted for 2001; that compares to 8.2, which was the peak in 1995. In contrast, fetal deaths have risen to 6.1 per 1,000 live births in 2001 from 5.0 in 2000. Neonatal deaths have decreased to 3.4 per 1000 live births. This rate is the same as that reported in 1999. The year 2000 rate of 4.1 reflected an increase.

**Figure 4: Out-of-Wedlock Live Births  
1991-2001 Resident Data**

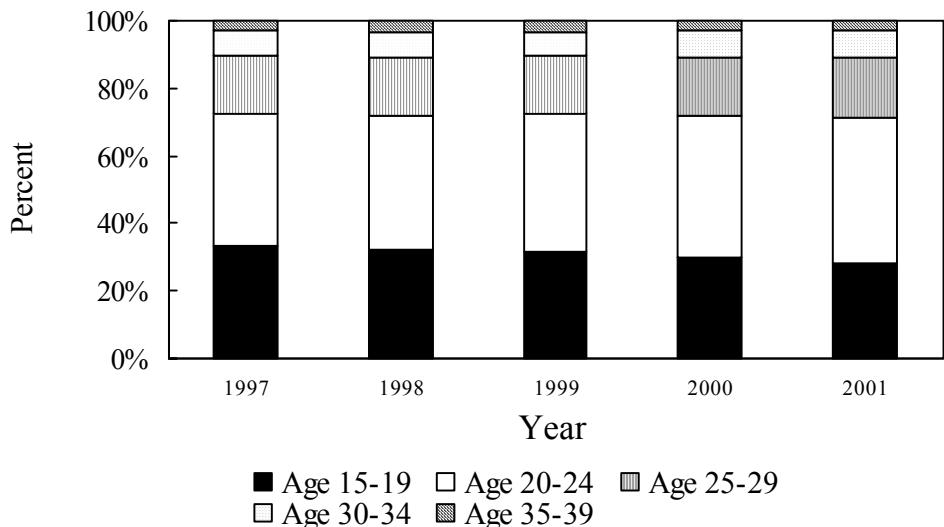

Out-of-wedlock live births rose this year to 287.8 per 1,000 live births from 279.8 in 2000. With the exception of a slight decrease in 1997, the rate continues to increase.

**Figure 5: In-Wedlock Live Births  
By Age of Mother  
1997-2001 Resident Data**

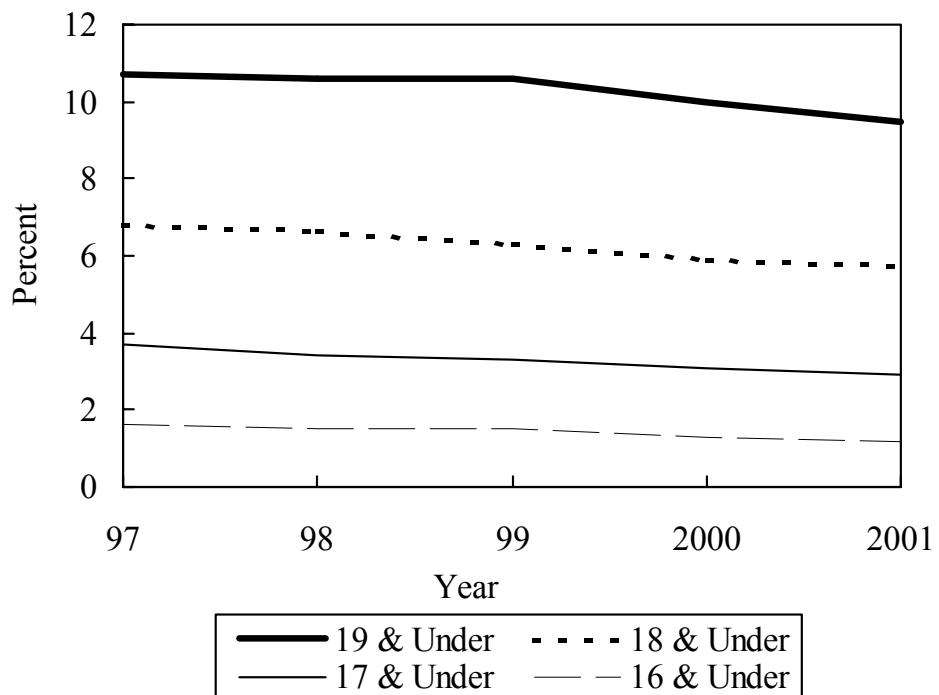

The highest number of "In-Wedlock" births remains consistent in the age group of 25-29, although this group is declining some from the highest percent noted in 1997-1998 to the current percent of 29.1 for 2001. The 15-19 age group has continued to decline since the 1999 rate of 2.3 to 2.1 currently. After remaining stable during 1998-1999, the percentage of mothers 30-34 increased to a high of 29.1 for 2001.

**Figure 6: Out-of-Wedlock Births  
By Age of Mother  
1997-2001 Resident Data**

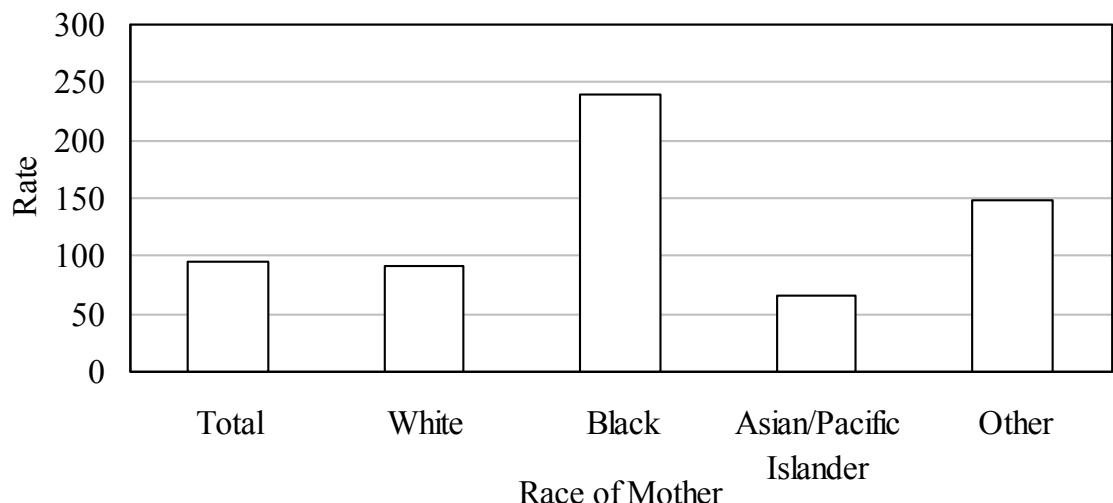

The number of "out-of-wedlock" births to mothers aged 20-24 has steadily decreased from 38.7 in 1997, to 30.2 in 2001. In addition, 30.2 percent of out-of-wedlock mothers are 15-19 years of age. This percentage had decreased continuously from 32.5 in 1997 to a low of 29.5 in 2000. The current year now reflects a slight increase to 30.2 percent. In contrast, the proportion of mothers in the 25-29 age group has fluctuated upward from a low of 16.7 percent in 1998 to 19 percent in 2001.

Figure 7: Live Births to Teenage Mothers  
As Percents of Total Live Births  
1997-2001 Resident Data

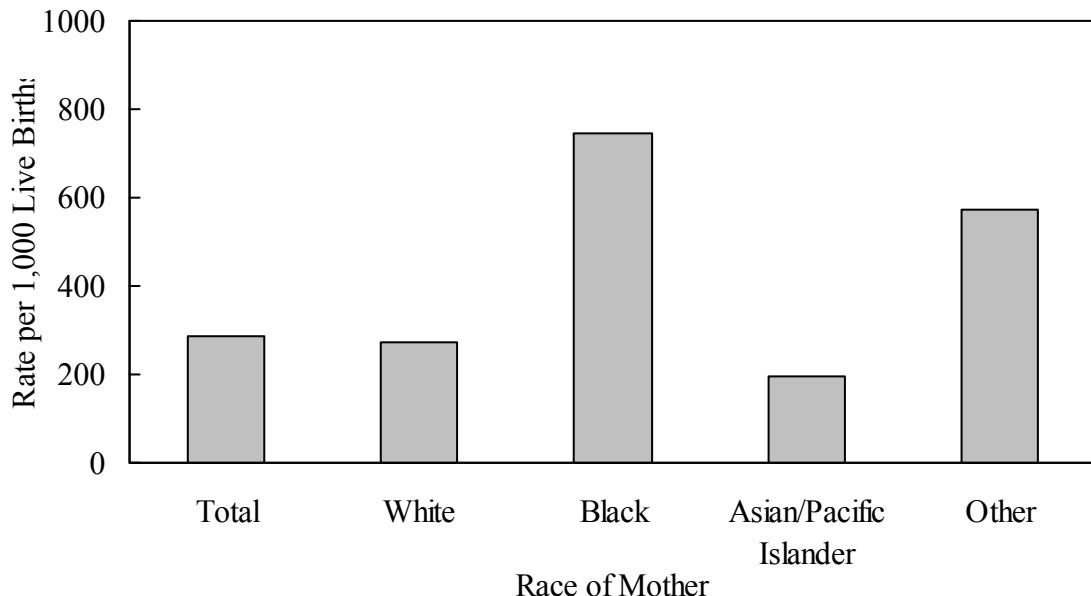

The proportion of live births born to mothers aged 19 and under has continuously declined between 1997-2001. The percent was 11.0 in 1997, compared to a current 9.5. A year ago it was 10 percent.

Figure 8: Mothers Under Age 20 by Race  
2001 Resident Data

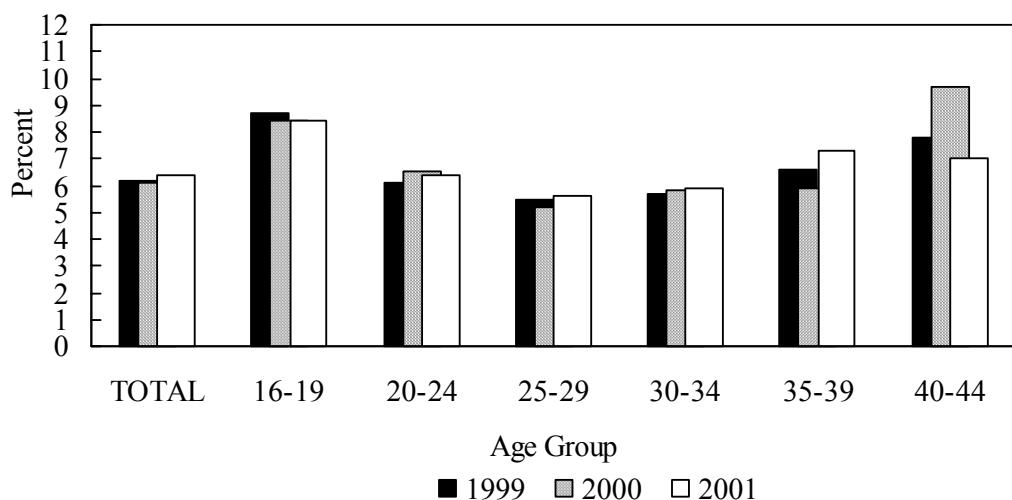

**Figure 9: Out of Wedlock Live Births by Race  
2001 Resident Data**

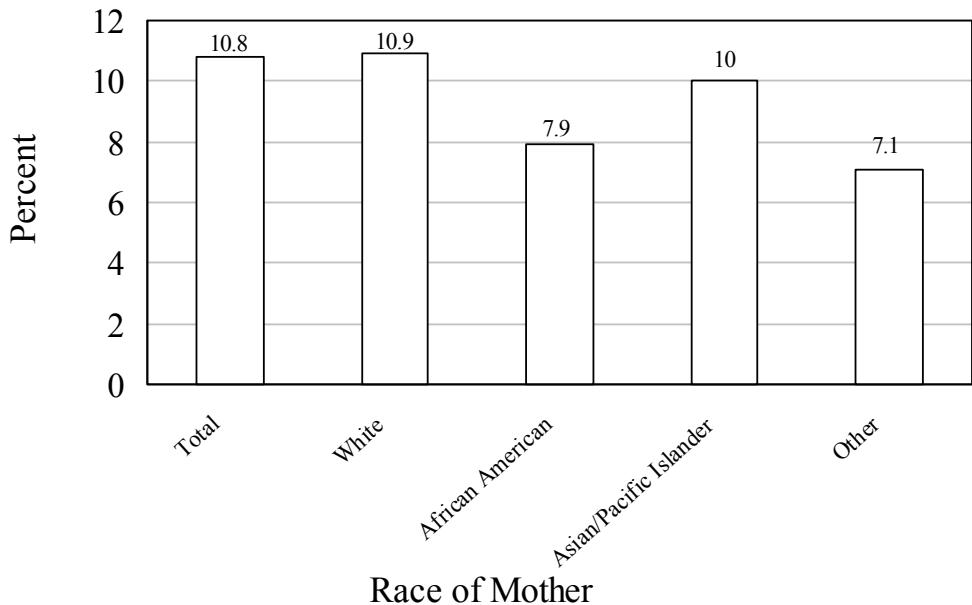

The Iowa African-American out-of-wedlock live birth rate increased in 2001 to 746 per 1,000 live births from 739.4 per 1,000 live births for 2000. The out-of-wedlock rate among white mothers rose to 271.3 in 2001, from 263.7 for last year.

**Figure 10: Low Birth Weight Live Births as  
Percent of Total Live Births  
Within Age Group of Mother  
1999-2001 Resident Data**

During 1999-2001, the highest percentages of low birth weight live births are among the youngest and oldest age groups of mothers.

Figure 11: Low Birth Weight Live Births by Race  
As Percents of Total Live Births  
2001 Resident Data

African American low birth weight live births declined in 2001 to 7.9 percent from 11.8 in 2000. White low birth weight live births had remained at a stable 5.9 percent during 1999-2000. In 2001 the percent increased to 10.9 percent

Figure 12: Number of live Births by Marital Status  
1991-2001 Residence Data

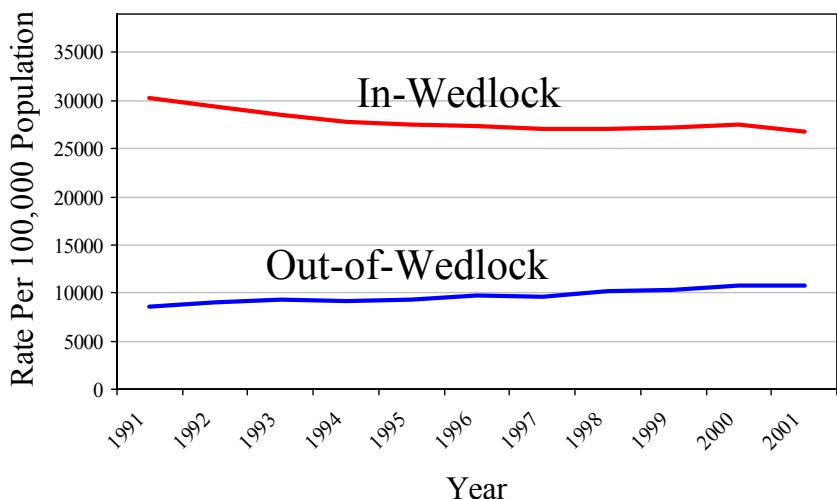

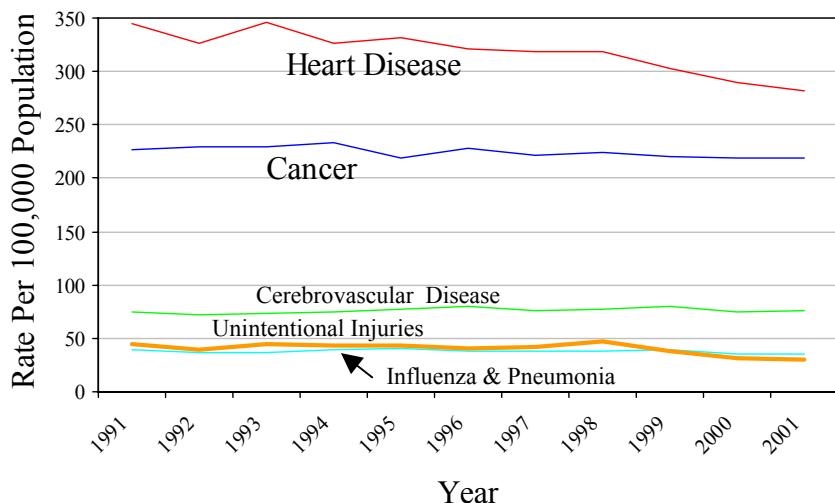

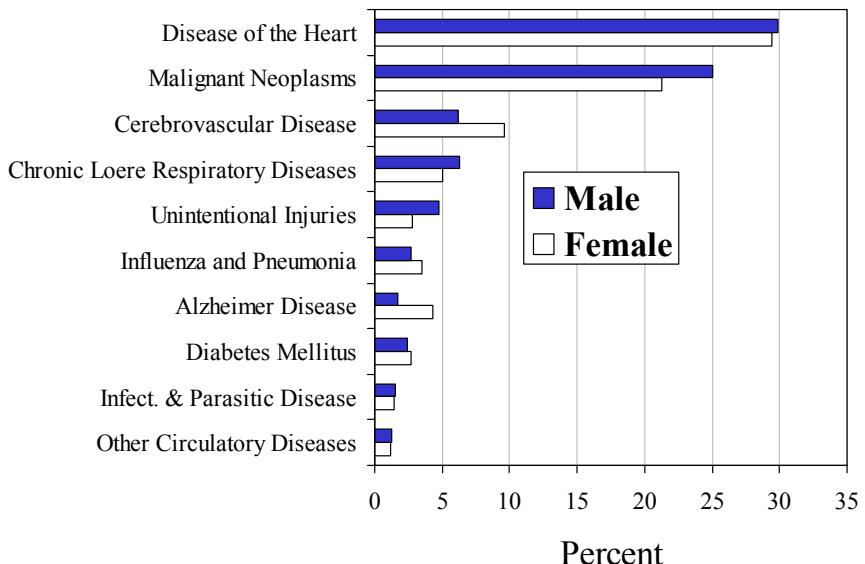

Figure 13: Rates For Selected Causes of Death  
1991-2001 Residence Data

Although heart disease is the leading cause of death in the state, the rate has steadily declined since 1995. The 2001 heart disease death rate was 281.3 per 100,000 population compared to 290.3 in 2000. The cancer death rate has increased slightly over time since 1996 but leveled off in 2000-2001. The first two leading causes of death constitute over 50 percent of the deaths in Iowa each year.

Figure 14: Ten Leading Causes of Death  
As Percents of All Deaths by Gender  
2001 Resident Data

Heart disease is nearly equal among the genders. Malignant neoplasm's, chronic lower respiratory diseases, and unintentional injuries are more prominent among males; in contrast stroke, influenza and pneumonia, and Alzheimer's are more prominent among females.

85 and Over

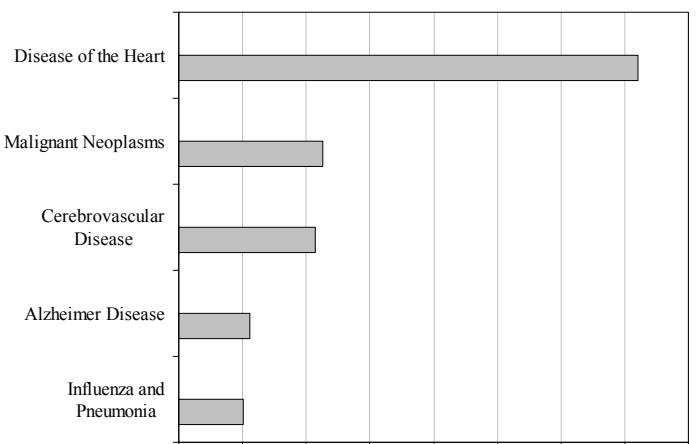

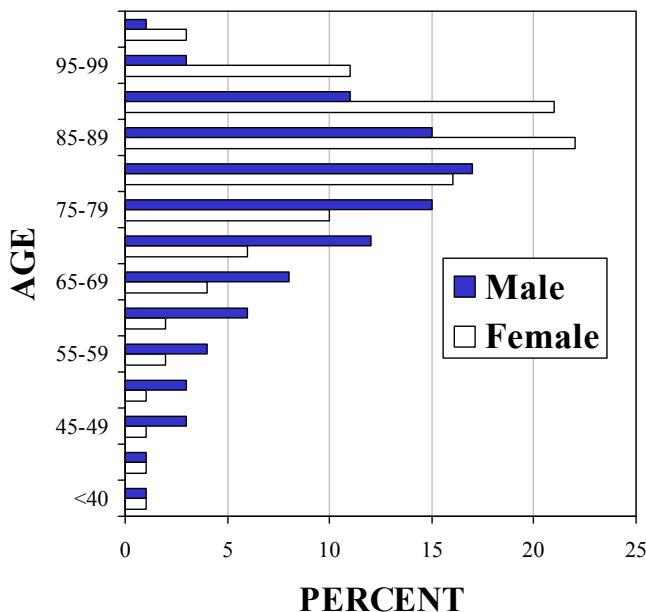

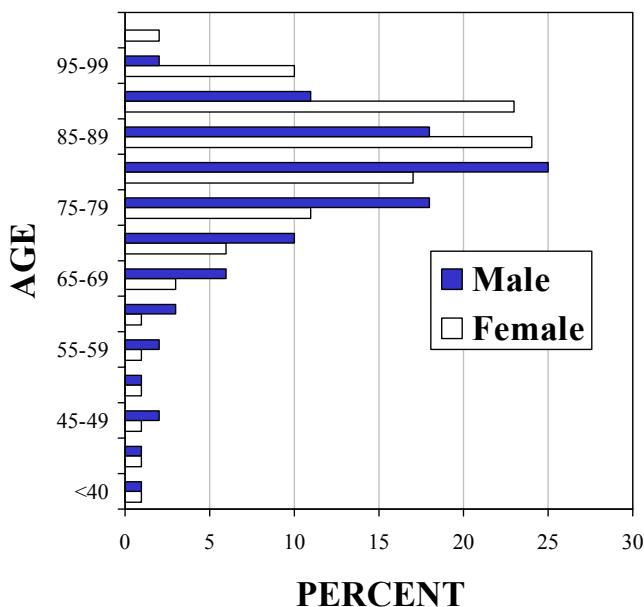

Figure 16: Heart Disease Deaths by Age and Sex  
 Percent Distribution  
 2001 Resident Data

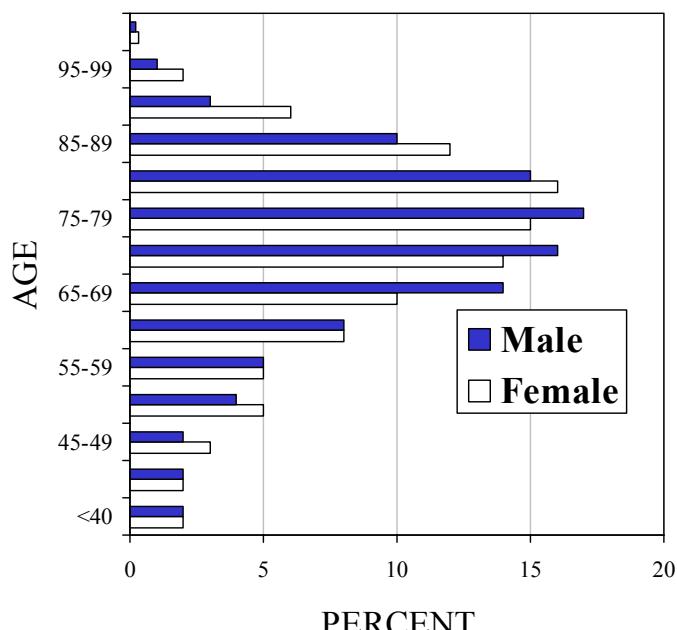

More Iowans die from heart disease than any other cause. While more women die of heart disease than men, these deaths tend to occur at older ages. In contrast, nearly one-half of the male deaths are concentrated in three age groups, which encompasses mid 70 through early 90 age group.

Figure 17: Cerebrovascular Disease Deaths by Age and Sex Percent Distribution  
 2001 Resident Data

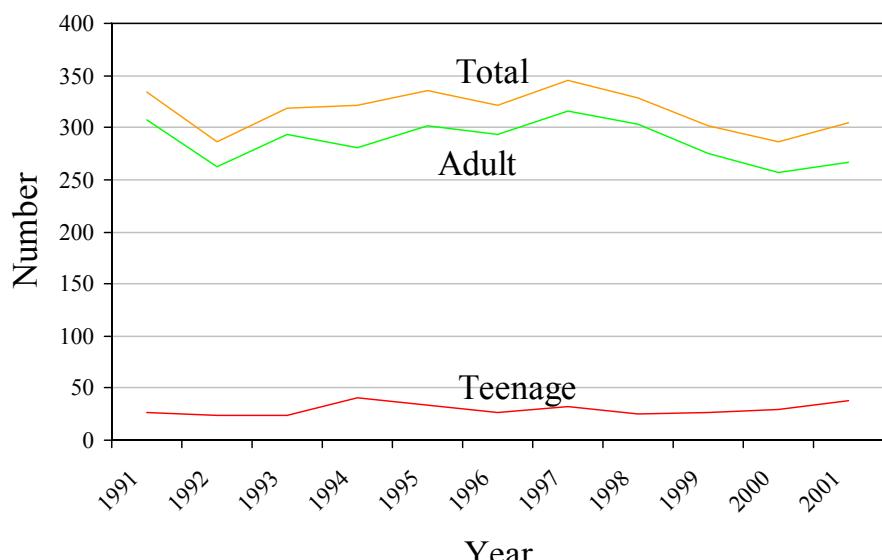

Cerebrovascular disease (stroke) affects older Iowans more than any other leading cause of death. At least 50 percent of strokes strike males starting in early 70's through late 80's.

Figure 18: Malignant Neoplasm Disease Deaths  
by Age and Sex Percent Distribution  
2001 Resident Data

Iowa cancer deaths occur to females at a somewhat older age than males starting in the early eighties. In contrast, males increasingly die in the earlier age brackets, starting in their sixties. Total cancer related deaths of Iowans in 2001 was 23.1 percent of all deaths, making it the second leading cause of death for 2001.

Figure 19: Teenage and Total Suicide Deaths  
1991-2001 Resident Data

Total suicide deaths increased to 304 in 2001; the number in 2000 was 286. Teenage suicides also increased, from 29 in 2000, to 38 in 2001. In 1999, there were 27 teenage suicides.

1991-2001 Residence Data

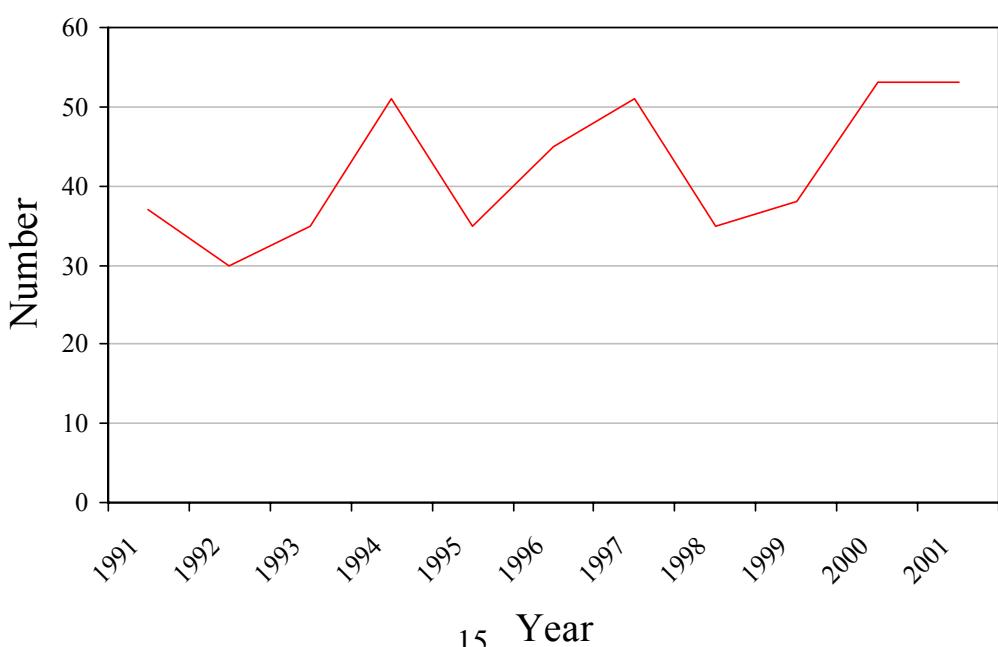

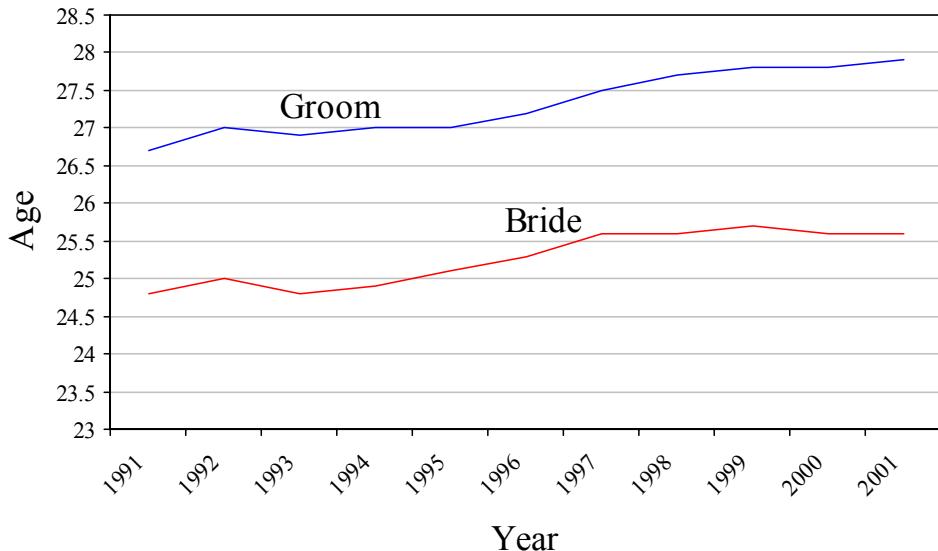

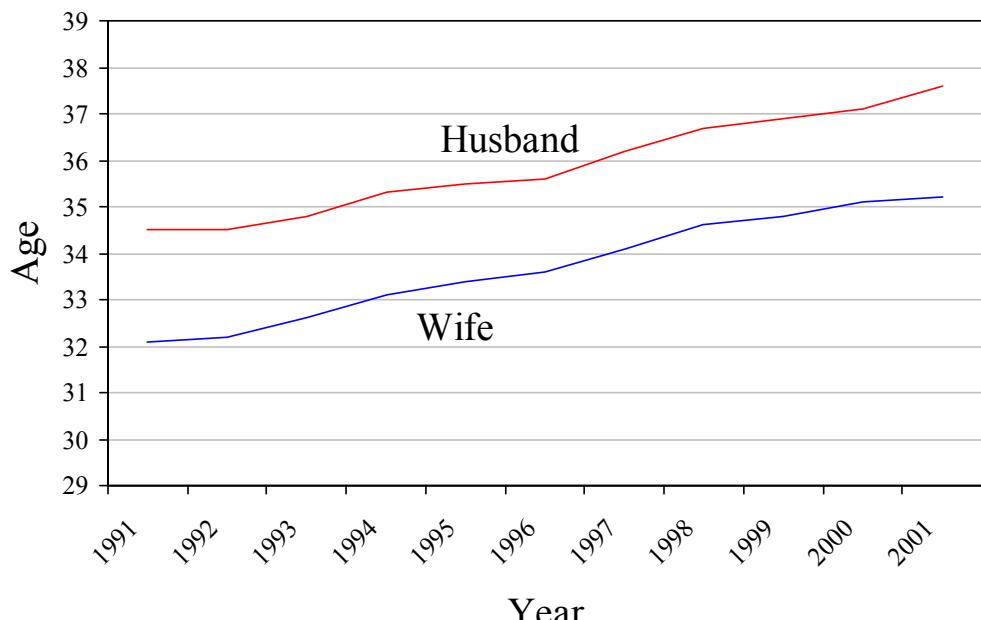

Figure 24: Median Age at Marriage  
1991-2001 Occurrence Data

The median age at marriage for grooms has fluctuated upward from 26.7 in 1991 to 27.9 in 2001. In addition, the median has almost steadily increased from 27 in 1995 to almost 28 in the current year. For brides, the median age remained the same for 2000 and 2001 at 25.6. This is a slight decrease from the high of 25.7 in 1999. It was nearly stable during 1997-1999.

Figure 25: Median Age at Dissolution of Marriage  
1991-2001 Occurrence Data

The trends in median age at dissolution of marriage are similar to those at marriage, with the median age for both husband and wife increasing over the past 10 years.

## **Explanation of Vital Events**

Statistics are based on resident data, except for marriages and dissolutions, which are recorded in the county where the event occurred.

Rates for live births, deaths, marriages and dissolutions are calculated per 1,000 estimated population; selected causes of death rates are per 100,000 population.

Rates for out-of-wedlock live births, mothers under age 20, low birth weight, live births, congenital malformations, fetal deaths, neonatal deaths, perinatal deaths and infant deaths are per 1,000 live births.

Maternal deaths are per 100,000 live births.
